Title	Asset Creation
User Story ID	
Navigation	Side Menu>Asset list
Narrative/ Description	As a user, I should be able to add new assets in the system with proper validation & unique identification.

Business Requirement	● Asset creation functionality allows IT Admin to add new assets like laptops, desktops, servers, and accessories.
	● Each asset should have a unique identification.
	● The system should store complete asset details for tracking and audit purposes.
	● The Asset Creation page will include the following attributes:
	  ○ Asset Name
	  ○ Asset Category
	  ■ Properties of the categories if configured
	  ○ Asset ID
	  ○ Serial No
	  ○ Purchase Date
	  ○ Asset Cost
	  ○ Vendor Name
	  ○ Asset Status
	  ○ Description (Optional)
	  ○ Assign Employee
	● Buttons:
	  ○ Save
	  ○ Cancel

Functional Requirement	● User should be able to open the **"Add Asset"** page navigate from the asset list. ● User should be able to enter all required asset details. ● The system should generate a unique Asset ID automatically. ● User should be able to select asset category from dropdown. ● User should be able to click on Save button after entering valid details. ● After saving, the asset should be added successfully to the system. ● A success message should be displayed: **"Asset created successfully."** ● The system should set default asset status as available. ● User should be able to cancel the activity using the Cancel Button.
Acceptance Criteria	**Asset Name** ● The user should be able to enter asset name in the text input area label: "Asset Name." ● Min length: 2 characters

- Max length: 50 characters

- If the user enters fewer than 2 characters, the system should display the validation message **“Minimum 2 characters are required.”**
- If the user enters more than 50 characters, the system should display the validation message **“Maximum 50 characters are required.”**
- Mandatory field
- If empty - Show message: **“This field is required.”**

Asset Category

- The user should be able to select a category from the dropdown.
- Mandatory field
- If not selected - Show message: **“Please select asset category.”**

Purchase Date

- The user should be able to enter a date using a date picker.
- The purchase date must be a past or current date(Future dates are not allowed).
- If the user selects or enters a future date, the system should display the validation message **“Purchase date cannot be a future date.”**
- The date should be accepted in the format (MM/DD/YYYY)
- Mandatory field
- If not selected - show message: **“Please enter the purchase date.”**

Asset Cost

- The user should be able to enter a numeric value only.
- Should not allow negative values.
- There will be no restriction or limit for positive values.
- Default currency should be set (e.g., INR)
- Optional Field

Vendor Name

- The user should be able to enter vendor name.
- Min length: 2
- Max length: 50
- Optional field
- If the user enter less than 2 character & more than 50 character the message should be displayed: **“Character length should be between 2-50.”**

	● If the user enters fewer than 2 characters, the system should display the validation message **"Minimum 2 characters are required."**
	
	● If the user enters more than 50 characters, the system should display the validation message **"Maximum 50 characters are required."**
	
	Asset Status
	● The default value will be available once created and saved.
	
	Description
	● The user should be able to enter additional details.
	● Optional field
	
	Save Button
	● The user should be able to click on the save button only when all the mandatory fields are validated.
	● On click:
	  ○ Validate all fields
	  ○ Save asset details
	  ○ Show success message- Asset created success
	
	Cancel Button
	● The user should be able to click **"Cancel"** at any time to discard all entered data and return to the previous screen without saving.
	
	Add property:
	● The user should be able to enter the property details
	● This field is optional
	  ○ Property Name
	  ○ Datatype
	  ○ Value
	  ○ Unique toggle
	  ○ optional
