Title	Asset Details
User Story ID	
Navigation	
Narrative/ Description	As a user, I should be able to click on any each asset row and the “View Details” icon from the Asset List so that I can see the complete asset information, current assignment, lifecycle history, and perform actions on the selected asset.

Business Requirement	● Asset Details functionality helps the IT Admin to view full details of any single asset, including hardware specifications, current status, assignment information, and complete ownership/repair history.
	● The Asset Details page will be accessible only to IT Admin (role-based access).
	● Asset Details page will include the following components:
	  ○ Asset Information section (read-only cards/fields)
	  ○ Current Assignment Details
	  ○ Asset History (tabular log)
	● Asset Details page will include the following buttons:
	  ○ Edit Asset
	  ○ Change Status
	  ○ Assign Asset / Return Asset (context-based on current status)
	  ○ Export Asset Details (PDF/Excel)
	  ○ Back to Asset List

Functional Requirement	● The IT Admin should be able to navigate to the Asset Details page by clicking on each asset row and the “View Details” icon from the Asset List. ● The page should display all asset information accurately and in a well-organized layout. ● The user should be able to view the Current Assignment Details (Employee name, Assignment Date, Expected Return Date if applicable). ● The user should be able to click on the “Edit Asset” button to modify asset information. ● The user should be able to click on “Change Status” button to update asset status (Available, Assigned, Damaged, Under Repair). ● The user should be able to click on the “Assign Asset” or “Return Asset” button as per the current status. ● The user should be able to click on “Back to Asset List” to return to the previous screen. ● After any update (edit/status change/assign/return), the details page should refresh automatically to show the latest data.

Acceptance Criteria	**Asset Information Section:**
	● The following fields must be displayed (read-only unless Edit mode is active):
	  ● Asset Name
	  ● Asset Category
	  ○ Property details related to the category if added
	  ● Asset ID
	  ● Serial No
	  ● Purchase Date
	  ● Asset Cost
	  ● Vendor Name
	  ● Asset Status
	  ● Description
	  ● Assigned Employee
	
	● All date fields must be displayed in MM-DD-YYYY format.
	● If any optional field is empty, the system should display "Not Available".
	
	Current Assignment Details:
	● The section must show:
	  ○ Assigned To (Employee Name or "Unassigned"if its not assigned)
	  ○ Assignment Date
	  ○ Expected Return Date (if assigned & added)
	● If the asset is not assigned, the section should clearly display **"This asset is currently unassigned"** with an **"Assign Asset"** button.
	
	Asset History :
	● The table must display the following columns:
	  ○ Date & Time
	  ○ Action (Assigned / Returned / Status Changed / Repaired / Edited)
	  ○ Details
	  ○ Performed By (User Name)
	● The table must support sorting by Date & Time (default descending).
	
	Edit Asset Button:
	● The user should be able to click the "Edit Asset" button
	● On click, the page should switch to edit mode (fields become editable) or navigate to a separate Edit Asset form.

	● All editable fields must follow the same validation rules as defined in the Add New Asset user story (alphanumeric, length limits, etc.). **Change Status/Assign/Return Buttons:** ● Buttons must be enabled/disabled contextually based on the current asset status. ● On successful action, a success message should be displayed: “Asset status updated successfully” / “Asset assigned successfully” / “Asset returned successfully”. ● The page must refresh with updated information. **Export Asset Details Button:** ● The user should be able to click “Export Asset Details” to download the complete asset information (including history) in Excel or PDF format.
