Title	Asset List
User Story ID	
Navigation	
Narrative/ Description	As a user, I should be able to view the complete Asset List so that I can track all company hardware (laptops, desktops, servers, accessories), check their status, assignment details, and manage assets effectively.

Business Requirement	Asset List functionality helps the IT Admin to view all assets in the system with real-time status and assignment information.
	
	● The Asset List page will be accessible only to IT Admin (role-based access).
	● Asset List page will include the following components:
	  ○ Search bar (by Asset Name, Model, Serial Number)
	  ○ Filters (Category, Status)
	  ○ Assets table with multiple columns
	● Asset List page will include the following buttons:
	  ○ Add New Asset
	  ○ Export to Excel

Functional Requirement	● User should be able to access the Asset List page from the side menu. ● The user should be able to see all assets displayed in a tabular format. ● The user should be able to use the search bar to asset list. ● The user should be able to apply filters by Category and Status, and see results updated instantly. ● The user should be able to click on any row to view asset details. ● The user should be able to click on **"Add New Asset"** button to navigate to the Add Asset form. ● The user should be able to click on **"Export to Excel"** button to download the current filtered list. ● The table should support pagination. 20 records should be displayed on one page. ● After any update (edit/assign), the list should refresh automatically to show the latest data.
Acceptance Criteria	**Search Bar:** ● The user should be able to enter search keywords in the text input area labelled **"Search Assets"**. ● The user can search by Asset Name, Model, Serial Number

	● The search field will accept alphanumeric characters and special characters used in serial numbers (e.g., -, /, _).
	● Min length – 2 characters (search triggers on typing).
	● Max length – 50 characters.
	● If the user does not input anything and clicks Refresh or applies filter, the full list is shown.
	● Placeholder: Search by Asset Name, Model, or Serial No.
	
	Category Filter:
	● The user should be able to select from a dropdown: All the available categories should be displayed in the filter.
	● On selection, the table must instantly show only matching assets.
	
	Status Filter:
	● The user should be able to select from a dropdown: Available, Assigned, Damaged, Under Repair, Lost, Return, In Repair (All by default).
	● On selection, the table must instantly show only matching assets.
	
	Asset Table:
	● The table must display the following columns:
	  ○ Asset Name
	  ○ Asset Category
	  ○ Asset ID
	  ○ Serial No
	  ○ Asset Status
	
	● Each row must have action icons with options: Edit, Assign Asset,Delete.
	● The table must support pagination with 15 records on each page.
	● If no assets match the search/filter criteria, the system should display the message: **"No records found"**.
	
	Add New Asset Button:
	● The user should be able to click the **"Add New Asset"** button only when logged in as IT Admin.
	● On click, user is navigated to the Add Asset form (separate screen).
	Export to Excel Button:
	● The user should be able to click **"Export to Excel"** to download the currently displayed (filtered/searched) list in Excel format.
	● The exported file should contain all visible columns and data.
