Title	Create Category
User Story ID	
Navigation	Login>Category list>Create category
Narrative/ Description	As a user, I should be able to click on the "+ Add Category" button so that I can create a new category and manage assets or licenses.

Business Requirement	● Create category functionality helps the user add a new category in the system.
	● The category list displays the full list of existing categories in tabular format.
	● The category list screen will include the following components:
	  ○ Search Category
	  ○ Category list table with columns:
	  ■ Category name
	  ■ Type
	  ■ Status
	  ■ Actions(Edit,delete)
	  ■ Pagination controls
	  ■ "+ Add Category" button
	● The category list screen will include the **"+ Add Category"** button.
	● Create category form (modal/page) will include the following components:
	  ○ Category Name
	  ○ Type
	● Create Category form will include the following button:
	  ○ Save
	  ○ Cancel

Functional Requirement	● The user should be able to view the category List in the table, showing all existing categories with their details(Category Name, Type, status) ● The user should be able to use the "Search Category" bar to filter the list by category Name. ● Provide pagination on list with 20 records on each page. ● The user should be able to click on the **"+ Add Category"** button to open the create category form. ● Only the IT Admin can create a category. ● The user should be able to enter the category name in the text field **"Category Name"**. ● The user should be able to select the **"Type"** (Asset or License). ● When the user enters the details and clicks on the "Save" button, the new category will be added to the table. ● The user should be able to click on the "Save" button only when the user enters valid data in all mandatory fields.

	● After successfully creating a category, the user will see the new category in the Category List, and the list will be refreshed. ● After successfully creating a category, the message is displayed, **"Category has been added successfully".** ● After successfully adding a category, the user will be navigated back to the Category List.

Acceptance Criteria	**Search Bar**
	● The user should be able to enter search keywords in the text input area labelled **"Search Category"**.
	● The users should simply search by Category Name.
	● Min length – 1 character (search triggers on typing).
	● Max length – 50 characters.
	● If the user does not input anything and clicks Refresh or applies a filter, the full list is shown.
	
	Category Table
	● The table must display the following columns:
	  ○ Category Name
	  ○ Type
	  ○ Status
	  ○ Action buttons
	  ■ Edit
	  ■ Delete
	● Each row must have action icons: Edit, delete
	● The table must support pagination (15 records per page) and column sorting (ascending/descending).
	● If no assets match the search/filter criteria, the system should display the message: **"No records found"**.
	
	Add property:
	● The user should be able to enter the property details
	  ○ Property Name
	  ○ Datatype
	  ○ Value (This will be added during asset creation, once the category is selected while asset creation and its relevant property will be loaded)
	  ○ Unique toggle
	  ○ Mandatory toggle
	
	Category Name:
	● The user should be able to enter Category Name in the text input area labeled **"Category Name".**
	● The text area will include alphanumeric characters.

	● Min length – 2 characters. ● Max length – 50 characters. ● The Category Name should be unique (no duplicate allowed). ● If the category name already exists, the system should display the validation message **“Category Name already exists”.** ● If the user does not input anything in the text area “Category Name” and clicks on the “Add Category” button, the system should display a validation message **“This field is required”** below the text area. ● If the user enters fewer than 2 characters, the system should display the validation message **“Minimum 2 characters are required.”** ● If the user enters more than 50 characters, the system should display the validation message **“Maximum 50 characters are required.”** ● **Placeholder:** Category Name ● The Category Name is the Mandatory field, which will be denoted by an asterisk symbol. **Type** ● The user should be able to select Type from the dropdown (options: Asset, License). ● The Type is the Mandatory field, which will be denoted by an asterisk symbol. ● If no Type is selected and the user clicks on the “Add Category” button, the system should display a validation message, **“This field is required”.** **Save Button** ● The user should be able to click on the Add Category button only when the valid data is entered in all the required fields (“Category Name”, “Type”, and “Status”). ● If the category is successfully added, a message will be displayed: **“Category has been added successfully.”** **Cancel Button:** ● The user should be able to click **“Cancel”** at any time to discard all entered data and return to the previous screen without saving.
